

Claim Amendments
Including a complete listing of all claims

1. (Canceled)

2. (Currently Amended) A single dose disposable dispenser for dispensing a material to be applied with an applicator comprising:

a material to be applied;

an applicator having an applicating end portion and a handle;

a tray having a material well adapted to receive and containing said material to be applied and an applicator well adapted to receive and hold the applicating end portion of said applicator; and

a cover attached to said tray covering the material well and said material and the applicator well and the applicating end portion of said applicator,

frangible portions formed in said cover defining a strip extending over the material well, whereby the strip is capable of being removed exposing the material well without removing the cover, and wherein the strip has a width less than a width of the material well, whereby edges of said cover adjacent said material may be used to wipe the applicating end portion so as to provide

an appropriate amount of said material on the applying end portion.

3. (Original) A single dose disposable dispenser as in claim 2 wherein:

the strip extends over the applicator well.

4. (Canceled)

5. (Original) A single dose disposable dispenser as in claim 2 further comprising:

a tab placed at one end of the strip, said tab extending over an edge of said tray, whereby said tab facilitates grasping and separating the strip from said cover.

6. (Canceled)

7. (Canceled)

8. (Canceled)

9. (Canceled)

10. (Canceled)

11. (New) A single dose disposable dispenser as in claim 2 wherein:

the applicator well has an opening between said tray and said cover through which the handle of said applicator extends outwardly of the applicator well with the handle of said applicator extending beyond an edge of said tray and said cover, and inwardly extending end portions that extend towards one another to define a space less than a diameter of the handle of said applicator, whereby any unintentional lateral separation of said applicator and said tray is resisted.

12. (New) A single dose disposable dispenser for dispensing a material to be applied with an applicator comprising:

a material to be applied;

an applicator having an applying end portion and a handle with a reduced portion;

a tray;

a material well formed within said tray, said material well having a material well width;

an applicator well adapted to receive and hold the applying end portion of said applicator, said applicator well formed with inwardly extending end portions that extend towards

one another to define a space slightly less than the reduced portion of the handle of said applicator; and

a cover attached to said tray covering the material well and said material and said applicator well and the applying end portion of said applicator; and

frangible portions formed in said cover defining a strip having a strip width, the strip extending longitudinally over the material well, the strip width being less than the material well width so that a portion of said cover extends over an edge of said material well, whereby the portion of said cover extending over the edge of said material well may be used to wipe the applying end portion.
